KAIJI FU

+1 (252) 267-0412 | hello@kaijifu.com | US Citizen

EDUCATION

University of North Carolina at Chapel Hill May 2026
B.S. Computer Science and Mathematics | GPA: 4.0 | Carolina Scholar (full scholarship, top 1%) | Honors College (top 10%)

EXPERIENCE

Software Engineering Intern, Full Stack - *Ember Learning* May 2024 – Aug 2024
- Completed a summer internship at an **AI** education platform, helping increase **MAU by 100x** and **revenue by 1000x**
- Shipped an **AI** grading feature by building **20+** responsive user interface components using **TypeScript** and **React**
- Built **AWS** backend supporting **100,000+ users** and **3M+** AI-graded questions w/ **Terraform**, generating $40k+ ARR
- Implemented fine-tuning pipelines for **LLMs**, improving grading accuracy across diverse standards by more than **60%**

Software Engineer, Open Source - *Mozilla* Dec 2023 – Present
- Contributed to Mozilla's bugbug project, a bug classification system that uses **ML** to triage **10k+** Firefox bugs/month
- Implemented critical fixes in **Python** for type-checking issues, merging **2000+** lines of code over **20+ pull requests**
- Collaborated with core maintainers through **GitHub issues** and **code reviews** to ensure code quality and compatibility

Research Assistant (AI/ML) - *UNC School of Medicine* Nov 2024 – Present
- Collaborated with cardiologists to develop **transformer architectures** to analyze ECGs and detect cardiac anomalies
- Used **Python** and **Tensorflow** on **SLURM/Linux** environment to achieve **11% higher accuracy** than the state of the art

Research Assistant (AI/ML) - *ECU School of Medicine* Sept 2022 – Feb 2023
- Researched how federated (distributed) **machine learning** enhances patient privacy when training diagnostic models
- Demonstrated that federated modeling maintains **95%+** accuracy while obviating cross-institutional data sharing
- Won **Best Poster** at the ISS Symposium, where I presented findings to faculty, industry partners, and fellow researchers

PROJECTS

Nolyn | *enterprise development, AWS/cloud, React, full-stack, C/C++, RTOS* May 2023 – Dec 2024
- Founded a startup that built a camera to capture license plates of vehicles illegally passing buses for **100x** lower cost
- Developed microcontoller firmware with **C/RTOS** and connected it to **AWS** for real-time image capture and analysis
- Engineered a **full-stack cloud application** with **AWS** and a **ReactJS** admin portal, providing **100%** real-time visibility
- Deployed on **2000+** buses across **10+** school districts and secured **$1k+** in venture capital from investors like Amazon

Blackbeard | *OpenCV, PyTorch, CUDA, robotics, embedded development, computer vision* Aug 2022 – May 2023
- Trained an AI object detection model with **OpenCV/PyTorch** to **4x self-driving** performance in a robotics competition
- Deployed the model on an **embedded Linux** coprocessor, achieving **95%** accurate real-time detection of field elements
- Implemented **MQTT** protocol with **C++** and **Java** to connect coprocessor and robot controller for reliable data transfer

72o | *Python, Numpy, Pandas, Machine Learning, Game Theory* Feb 2025
- Collaborated with team of 4 to build a pokerbot with **Python** that placed **1st/112** in the UNC Pokerbots competition
- Applied **counterfactual regret minimization (CFR)** algorithms to develop game-theory optimal betting strategie
- Engineered an opponent modeling system capable of adapting to villain's play patterns, increasing winrate by **32%**
- Leveraged **multi-threading** to parallelize decision-making, decreasing latency by **3x** and avoiding disqualification

Loggerhead | *Swift, AWS, PostgreSQL, iOS development, RESTful APIs* Jan. 2021 – Feb. 2024
- Developed a **full-stack iOS application** in **Swift** to track and analyze tennis practice sessions with ball machines
- Designed and implemented a **RESTful API** using **AWS Lambda** and **API Gateway** to store and retrieve user data
- Created a robust data model with **PostgreSQL** for tracking practice metrics, ball machine settings, and analytics
- Implemented progress visualization with **SwiftUI**, helping users track improvement through data-driven insights

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML, CSS, C, C++, Go, Java, Swift
Relevant Coursework: Object-Oriented Programming, Computer Organization, Data Structures, Algorithms & Analysis
Frameworks: Object-Oriented Programming, React, PyTorch, TensorFlow, Pandas, TailwindCSS, Vue.js, Angular
Developer Tools: Git, GitHub, AWS, GCP, MQTT, Docker, CI/CD, Linux, Terraform, Kubernetes, Figma, JUnit, PostgreSQL
Domain Knowledge: Enterprise Development, Machine Learning, AI, LLMs, RESTful APIs, iOS, Open Source
